Chapter 1: Solar Basics

Solar energy is the fastest growing source of electricity in the world. Prices for solar panels have fallen by more than 80 percent since 2010.

The main advantage of solar power is that it produces no emissions while generating electricity. Panels usually last twenty five years or more.

Chapter 2: Section 2

Batteries store excess solar energy for use at night. Lithium ion batteries are the most common storage technology today.

Governments in India, China and Germany have invested heavily in solar parks. India targets 280 gigawatts of solar capacity by 2030.

Chapter 3: Section 3

The warranty period for most residential panels is 25 years. Installation costs depend on roof size and local labour rates.

Maintenance is simple: panels should be cleaned twice a year to remove dust, which can reduce output by up to 15 percent.
